

Learning 4.0

How to solve the global skills challenge in manufacturing with digital on-the-job instructions.

01. Speed up experiential learning.

- Empower learning through immersive hands-on participation, rather than absorbing knowledge by listening or reading.
- Embed experiential learning into everyday work with on-the-job training tools.

02. Shift focus from institutions to individuals.

- Stimulate your people to expand their skill set.
- Enable bottom-up knowledge sharing.
- Capture tribal knowledge from the older workforce.

03. Empower vulnerable learners.

- Assess which workers are most exposed to automation and identify how their talents can be re-deployed.
- Support older and lower-educated workers.
- Democratize knowledge capture and sharing.
